

# Edit scope: not controllable by graph weighting, controllable by mask rigidity

Pure-ARAP + distance-weighted RBF, synthetic bar/blob, seeds {0,1,2}. Shared y-axis (same ruler both panels). Left: static\_far, live  $\gamma$  band {1,2,3,5} — floor-onset  $\gamma=20$  and gated  $\gamma=50$  excluded; faint lines = each K, band =  $\pm$ seed spread. Right: mask control at  $\delta=0$ ,  $\gamma_0=5$ ,  $K_0=12$ ; error bars = seed spread. Pending DeformSplat cluster corroboration.
